

On the basis of the assessment of the state of conservation of the flora in the Catalan Countries, which shows that between 4 and 8.5% of the vascular plants are in danger of extinction, and in the light of the analysis of plant conservation policies which has been conducted (in many cases with quite dissimilar models and results) in the various territories forming part of this area, the suitability is reaffirmed of implementing a strategy for the future that will ensure the conservation of our flora *Estratègia catalana de conservació de flora (2014-2020)* (*The Catalan Plant Conservation Strategy (2014-2020)*) is a document which reflects the consensus of the Catalan botanists and which follows the global and European plant conservation strategies. This key document is easily applicable to the various territories of the Catalan Countries.
